BROKO AI PLATFORM

Master Roadmap v3.0 — Confidential

Broko Realty Limited · Broko Technology Limited

CEO & Broker of Record: Pankaj Arora | July 2026

🎯 Seed Round Target: $25-35M | Timeline: 6 Months | Agent Target: 100 by Month 6

North Star	Pre-Seed Status	Seed Round
#1 AI Brokerage & Tech Provider in Ontario	**Completed**	**$25-35M target within 6 months**

COMPANY VISION

Broko Technology Limited is building the world's first plug-and-play AI brokerage operating system — proven first through Broko Realty as the internal client, then commercialized as SaaS to Ontario brokerages, expanded Canada-wide and into the US, and ultimately powering humanoid real estate agents.

GUIDING PRINCIPLE: Agents Only Sell. AI Handles Everything Else.

Every human repetitive task in real estate — paperwork, CMA preparation, lead follow-up, offer preparation, compliance checking, training — will be automated. This is not optional. This is the product.

AGENT PAIN POINTS — Priority Order for Platform Build

#1 Priority	**CMA & Property Insights**	Hours of manual research per CMA. Agents spend 2-3 hours per CMA that Broko AI produces in 10 seconds. This is the #1 recruitment hook and the core ML IP.
#2 Priority	**Lead Generation & Qualification**	Agents need a steady qualified pipeline. No leads = no income. AI-powered lead scoring and nurturing eliminates dead-end conversations.
#3 Priority	**Paperwork & Offer-to-Close Workflow**	OREA forms, offer preparation, document signing, transaction tracking — all take 3-5 hours per deal. AI reduces this to 20 minutes.

6-MONTH SPRINT PLAN

Month 1 — S1 **Foundation Sprint**	CMA v2 accuracy sprint (Thrilok), VOW compliance fixes (Week 1 — legal risk TODAY), Homepage CRO (Bestimate as hero CTA), Free-flow search QA and production launch, Lead capture all channels live, CRM dashboards v1 (all 5 roles), Agent recruitment campaign launch (Ivan), Compliance framework sprint (CASL FINTRAC PIPEDA)
Month 2 — S2 **Growth Sprint**	30 agents active and generating revenue, Transaction management + e-signing live, Broko Brain RAG live (all RECO + OREA + SOPs loaded), All 10 bots v1 deployed, Neighbourhood SEO pages (500+ pages generated), AI lead nurturing (WhatsApp + email automated), Seed Round investor deck v1 complete
Month 3 — S3 **Intelligence Sprint**	Agentic AI orchestrator (LangGraph multi-bot live), Voice AI lead follow-up bot (Vapi.ai + ElevenLabs), Open house bot R&D begins, SaaS API architecture documented, 50+ agents active, Investor outreach begins — target 20 first meetings
Month 4-6 — S4 **Scale & Raise Sprint**	Seed round closed ($25-35M), 100 agents active and profitable, SaaS pilot — 1-2 external Ontario brokerages, Open house tablet bot hardware pilot (first property), Software humanoid v1 demo, Financial controls + CFO in place

TECHNOLOGY ARCHITECTURE & AI STACK

Every component of the Broko platform is designed to self-improve. The architecture ensures that every agent action, client interaction, CMA run, and deal outcome feeds back into making the system smarter. This is not a static software product — it is a living AI organism.

HYBRID AI ARCHITECTURE — NON-NEGOTIABLE PRINCIPLE

Sensitive MLS/VOW data NEVER leaves the AWS environment. This is a PropTx and CREA data licence requirement. Claude API is used ONLY for non-sensitive reasoning tasks: report writing, compliance Q&A, offer narrative drafting, bot conversations.

Tool / Service	Use Case	Data Sensitivity
Claude API (claude-sonnet-4-6)	CMA reports, bot conversations, compliance Q&A, offer narrative, content generation	🟢 Non-sensitive only
AWS SageMaker	ML model training on proprietary sold data — stays in VPC always	🔴 Sensitive — AWS only
Pinecone (AWS PrivateLink)	Vector store for Broko Brain RAG — knowledge retrieval	🟡 Semi-sensitive
LangGraph	Multi-step agentic workflows, orchestration across bots	🟢 Non-sensitive only
LangChain	RAG pipeline, document retrieval, chain orchestration	🟡 Depends on payload
Langfuse (self-hosted)	AI output monitoring, hallucination detection, cost tracking	🔴 All — self-hosted
n8n (self-hosted)	Workflow automation — all marketing, CRM, alert pipelines	🟡 Semi-sensitive
MLflow	ML model versioning, experiment tracking, CMA retraining	🔴 Sensitive — AWS only
OpenAI Whisper	Meeting transcript audio-to-text (not MLS data)	🟢 Non-sensitive only
ElevenLabs + Vapi.ai	Voice AI for lead follow-up and open house bot	🟢 Non-sensitive only
GitHub Copilot + Cursor	Developer AI assistance — all team members daily	🟢 Code only

LOCAL MODEL LIMITATIONS — KNOWN CONSTRAINTS & MITIGATIONS

During planning sessions, a concern was raised about context window limitations of local models. This section documents all known AI constraints and the architectural decisions to address them:

Context Window Limits (All LLMs)

Problem	Solution & Mitigation
Very long MLS datasets, RECO Act documents, or full deal histories cannot fit in a single LLM context call	Chunked RAG retrieval — break documents at semantic boundaries, not character counts. Summarise earlier context before new calls. Use Pinecone to retrieve only relevant chunks per query.

Model Accuracy Degradation (Fast Markets)

Problem	Solution & Mitigation
CMA model trained on historical data may become inaccurate during rapid price changes	Market velocity detection layer — if absorption rate changes >15% week-over-week, model weights adjusted and agents warned. Weekly retrain with fresh sold data.

Hallucination Risk (All Generative AI)

Problem	Solution & Mitigation
Claude can generate plausible but incorrect information,	AI Validation Bot checks every output. BOR Bot explicitly cites RECO source. All compliance outputs include disclaimer. Confidence scoring 0-100 on every AI output.

especially for compliance and legal content	

Cold Start Problem (ML Models)

Problem	**Solution & Mitigation**
CMA scoring model, lead scoring model need minimum data before predictions are reliable	Explicit minimum thresholds: 200+ leads before scoring model goes live, 50+ CMA ratings before first retrain. Fallback to rule-based defaults during cold start.

Multi-Agent Latency (LangGraph)

Problem	**Solution & Mitigation**
Chaining multiple bots adds latency — user experience can degrade if chain is long	Parallel execution where possible. Streaming responses to show progress. Hard timeout of 15 seconds with graceful degradation to cached/simple response.

Embedding Drift (Pinecone RAG)

Problem	**Solution & Mitigation**
As knowledge base grows, early embeddings may become less relevant — retrieval quality degrades	Monthly retrieval quality evaluation using golden test dataset. Re-embed entire knowledge base quarterly if evaluation score drops below threshold.

API Rate Limits (Claude, Meta, Google)

Problem	**Solution & Mitigation**
High traffic periods can hit rate limits causing delays or failures	Request queuing with exponential backoff. Priority queue: transaction-critical requests first, marketing requests throttled. Multiple API key rotation for high-volume endpoints.

MODULE-BY-MODULE ROADMAP — LINE BY LINE DETAIL

Each module below contains granular task cards with: execution notes, feedback and self-learning loops, loopholes and risks, growth opportunities, automation opportunities, and 10 discussion points for focused 6-minute team meetings.

M01 — Marketing & Brand | Owner: Ma10 Megha | Entity: RT

GOAL: Establish Broko as #1 AI real estate brand in Ontario within 6 months through SEO dominance, paid lead generation, social proof, and agent marketing automation.

FEEDBACK LOOP: SEO rankings, ad performance, social engagement → Claude weekly analysis → updated strategy → Megha approves → auto-executes. Entire marketing loop runs without human intervention except final approval.

BRK-M01-001 • SEO & Content Strategy 🔴 **Critical** Month 1-2 / S1

Keyword research, on-page SEO, neighbourhood guides, Broko Pulse articles, programmatic pages

Owner	Ma10 Megha
Next Action	Br5 Deepanshu reviews monthly KPIs
Deps	M04.1 — Website stable
Tools & Stack	Semrush API, Ahrefs, Claude AI, Next.js SSG, n8n
Execution Notes	Start with 20 high-intent Ontario real estate keywords. Claude generates content briefs in batch. Brandlume executes. Weekly review — if CPC >$8 or leads below target, adjust immediately.

🔄 **Feedback & Self-Learning Loop**

SEO performance auto-fed to Claude weekly via Semrush API → generates new keyword targets and content calendar → Megha approves → Haresh executes. 7-day automated loop.

⚠️ Loopholes & Risks	🚀 Growth Opportunity	⚡ Automation Opportunity
Brandlume may not follow brief without oversight. LLM context limits mean Semrush data must be chunked. Content may become repetitive without diversity checks.	Programmatic SEO can generate 1000+ neighbourhood pages. AI market reports become PR assets and earn backlinks from media.	Content briefs, meta descriptions, alt text, internal linking — all automated via Claude + n8n. Human needed only for final quality gate.

💬 **Discussion Points for Meeting**

- How many leads per month is Brandlume currently generating?
- What is current cost per lead from Google vs Meta?
- Which neighbourhoods get most traffic today?
- Is Broko Pulse being updated regularly?
- What keywords are competitors ranking for that we are not?
- How long does Megha take to approve content?
- Can Haresh handle daily posting alone?
- What is our domain authority score?
- Are neighbourhood pages built or still planned?
- What content format gets most engagement — video, blog, or social?

BRK-M01-002 • Paid Ads — Google & Meta 🔴 **Critical** Month 1 / S1

Google Search + Display + Meta lead gen campaigns, AI creative testing, auto-pause underperformers

Owner	Ve1 Brandlume
Next Action	Br1 Pankaj reviews spend vs leads weekly
Deps	M02.1 — CRM lead capture live
Tools & Stack	Google Ads API, Meta Ads Manager, Performance Max, Meta Advantage+
Execution Notes	$7-10K/month budget. Hard KPI: cost per lead <$25. Auto-pause campaigns below threshold. A/B test 3+ creatives at all times.

🔄 **Feedback & Self-Learning Loop**

Ad performance pulled via API daily → Claude analyses patterns → generates new ad copy variants → Brandlume implements weekly. Winning creative patterns feed next month strategy.

⚠️ Loopholes & Risks	🚀 Growth Opportunity	⚡ Automation Opportunity
Ad fatigue sets in after 2-3 weeks — creative must refresh constantly. Meta	AI creative testing runs 20+ variants simultaneously. Retargeting Bestimate	Ad copy generation, audience segmentation, performance reporting,

algorithm changes can kill performance overnight. No in-house watcher at $10K/month spend is high risk.	users is a high-converting untapped audience. Lookalike audiences from converted leads can scale efficiently.	creative variant production — all automated. Human approves budget changes only.

💬 Discussion Points for Meeting

- What is current ROAS on Google vs Meta?
- Which ad creative has performed best historically?
- Are we retargeting Bestimate users?
- What audiences are we targeting — buyers, sellers, or both?
- How quickly does Brandlume respond to performance issues?
- Are we using Performance Max or manual campaigns?
- What landing pages do ads go to?
- Is there a dedicated agent recruitment landing page?
- How many leads came from paid ads last month?
- What is monthly budget split between Google and Meta?

BRK-M01-003 • Social Media & Brand Content 🟠 **High** Month 1 / S1

Daily posts, reels, agent spotlights, market updates, AI-generated video across all platforms

Owner	Ma11 Haresh
Next Action	Ma10 Megha approves weekly content calendar every Monday
Deps	M01.5 — Brand guidelines complete
Tools & Stack	Buffer, Canva AI, HeyGen, Hootsuite, Claude AI, Runway ML
Execution Notes	Minimum 1 post daily. HeyGen for AI video reels. Claude generates 7-day caption batch every Monday. Sujit designs master templates once — reused automatically.

🔄 Feedback & Self-Learning Loop

Engagement data fed to Claude weekly → identifies top content types and optimal posting times → generates next week calendar optimised for engagement. A/B test post formats monthly.

⚠️ **Loopholes & Risks** Social algorithms change frequently. HeyGen AI videos may feel generic without personalisation layer. Single person managing all platforms is a single point of failure.	🚀 **Growth Opportunity** Daily market update videos build Broko as the go-to Ontario real estate authority. Agent spotlight reels are proven recruitment tools — prospects see happy agents and want to join.	⚡ **Automation Opportunity** Caption writing, scheduling, hashtag research, performance reporting, content calendar creation — all automated. Human needed only for brand voice review and community responses.

💬 Discussion Points for Meeting

- Which platform drives most leads — Instagram, Facebook, LinkedIn, or TikTok?
- What is current follower count per platform?
- How many reels vs static posts per week currently?
- Is Haresh creating or just scheduling content?
- Do agents share Broko content on their own profiles?
- What content themes get most engagement?
- Are we doing any paid social boosting?
- Does Sujit have brand templates ready?
- How is Megha involved in content approval?
- Are we on TikTok given real estate content performs very well there?

BRK-M01-004 • Agent Marketing Kit Auto-Generation 🟠 **High** Month 2 / S2

Per-agent branded templates, listing posts, flyers, email signatures — auto-generated on onboarding

Owner	Ma12 Sujit
Next Action	Ma7 Subhashis integrates kit generation into agent portal onboarding flow
Deps	M03.2 — Agent onboarding live

Tools & Stack	Canva API, Claude AI, Adobe Express API, n8n
Execution Notes	Agent enters name and photo on signup → all branded materials auto-generate in 60 seconds. Claude writes personalised bio. No manual design per agent ever.

🔄 Feedback & Self-Learning Loop

Agent usage data (which templates used most frequently) feeds back to Sujit → redesign underused templates quarterly. Claude learns agent tone preferences and personalises copy over time.

⚠️ Loopholes & Risks	🚀 Growth Opportunity	⚡ Automation Opportunity
Canva API has rate limits — batch generation needs throttling logic. Poor agent photo quality makes branded materials look unprofessional. Templates become outdated if brand evolves without systematic update process.	This becomes a major SaaS feature — every brokerage client gets auto-generated agent kits. Could charge $50/agent/month for white-label version. Huge agent retention and recruitment tool.	Bio writing, template population, material generation, email signature creation — fully automated. Human reviews only first batch per agent for quality.

💬 Discussion Points for Meeting

- Do agents currently create their own marketing materials?
- What materials do agents request most often from admin?
- Is there a current brand guideline document?
- Which file formats do agents need — PDF, PNG, social sizes?
- Can Canva API handle 30+ agents generating simultaneously?
- Should listing descriptions be auto-generated from MLS data?
- Do agents want materials in French for Quebec expansion?
- How often do agents need materials updated?
- Should kit include print-ready flyer formats?
- Can we integrate directly with social platforms for one-click posting?

BRK-M01-005 • Brand Positioning & Innovation Board Bot 🟠 **High** Month 2 / S2

Weekly AI competitor analysis, brand sentiment monitoring, innovation ideas, marketing advisor bot

Owner	Br1 Pankaj
Next Action	Ma3 Thrilok builds and deploys competitor monitoring automation pipeline
Deps	None
Tools & Stack	Claude API, Semrush API, Google Trends API, Google Alerts API, n8n, Pinecone
Execution Notes	Every Monday 8am: n8n pulls competitor website changes + Google Trends + ad performance → Claude generates innovation brief with top 3 priorities → Pankaj reviews and assigns to roadmap.

🔄 Feedback & Self-Learning Loop

Innovation board output quality improves as more competitive data is ingested. After 3 months Claude builds pattern recognition on what competitors do before Broko responds — becomes predictive intelligence.

⚠️ Loopholes & Risks	🚀 Growth Opportunity	⚡ Automation Opportunity
Competitor scraping may violate ToS if too aggressive — use official APIs and public data only. Innovation ideas need human strategic filter — not all AI suggestions are sound. Google Reviews sentiment can be gamed.	Real-time competitor ad monitoring via Meta Ad Library API reveals their exact targeting strategy. Sentiment analysis can predict agent churn before it escalates. Innovation board recommendations become weekly leadership agenda.	Competitor research, brand mention monitoring, weekly report generation, trend analysis — fully automated. CEO spends 30 minutes reviewing not 3 hours researching.

💬 Discussion Points for Meeting

- Who are our top 3 competitors for agent recruitment in Ontario?
- What does HouseSigma do better than us today?
- What is Zolo doing in marketing we should counter?
- Do we have Google My Business optimised?
- What is our current Google review rating and count?
- Are agents leaving competitors to join us — if so why?
- What is our brand awareness among Ontario buyers and sellers?
- Are we monitoring competitor job postings?

- What one thing would make Broko instantly more recognisable?
- Should we position as technology company or brokerage first in all communications?

M02 — Lead Generation & CRM | Owner: Ma4 Debasis | Entity: BT

GOAL: Every lead captured within 60 seconds, scored by AI, distributed to right agent, nurtured automatically — zero manual steps from ad click to agent conversation.

FEEDBACK LOOP: Lead conversion outcomes retrain scoring model weekly. Message performance retrains nurturing sequences. Agent response time data improves assignment rules. All automated on Sunday night pipeline.

Tasks: BRK-M02-001 Lead Capture All Channels | BRK-M02-002 AI Lead Scoring | BRK-M02-003 Lead Distribution | BRK-M02-004 AI Nurturing | BRK-M02-005 CRM Dashboards | BRK-M02-006 Voice AI Bot — All detailed in Notion CSV.

M03 — Agent Recruitment & Operations | Owner: Br4 Ivan | Entity: RT

GOAL: 30 agents by Month 2, 100 agents by Month 6. Target: licensed Ontario agents unhappy at competitor brokerages. Hook: 10-second CMA demo, 5-minute offer prep, AI handles all admin.

FEEDBACK LOOP: Recruitment campaign performance → message refinement monthly. Agent first-week activity predicts retention. Performance data identifies coaching needs automatically.

Tasks: BRK-M03-001 Recruitment Campaign | BRK-M03-002 Digital Onboarding | BRK-M03-003 Training Bot | BRK-M03-004 Performance Dashboard — All detailed in Notion CSV.

M04 — Consumer Platform — broko.ai | Owner: Ma7 Subhashis | Entity: BT

GOAL: #1 consumer real estate platform in Ontario — fastest search, best CMA estimates (Bestimate), AI-powered chat, full VOW compliance, AODA accessible, sub-2-second load times.

CRITICAL WEEK 1: Footer still shows Re/Max branding (legal risk). No VOW Terms of Use gate before MLS data (PropTx licence risk). These must be fixed before any other development starts.

Tasks: BRK-M04-001 Homepage CRO | BRK-M04-002 VOW Compliance | BRK-M04-003 Free-Flow Search | BRK-M04-004 Neighbourhood Pages | BRK-M04-005 AI Chat | BRK-M04-006 AODA — All detailed in Notion CSV.

M05 — CMA & Property Intelligence | Owner: Ma3 Thrilok — ELEVATED ROLE | Entity: BT

GOAL: Most accurate CMA engine in Ontario (target 99%). Three-pillar model: Hard Value (specs), Soft Features (qualitative), Market Analysis (trends/comparables). Branded report in 10 seconds.

CORE IP — CONFIDENTIAL: 2+ years proprietary ML development. Linear Regression + XGBoost + additional models. Thrilok is the lead. All model weights and training data stay on AWS. Never share externally.

FEEDBACK LOOP: Agent thumbs up/down on every CMA → weekly retraining pipeline → accuracy improves every Sunday night → more accurate model → agents trust it more → more ratings → better model. Virtuous cycle.

Tasks: BRK-M05-001 Accuracy Sprint | BRK-M05-002 Report Auto-Generation | BRK-M05-003 Hybrid Architecture | BRK-M05-004 Price Alerts | BRK-M05-005 Feedback Loop | BRK-M05-006 Renovation Estimator — All in Notion CSV.

M06 — Transaction & Deal Management | Owner: Ma4 Debasis | Entity: BT

GOAL: Complete offer-to-close workflow automated. OREA form auto-fill (45 min → 5 min), e-signing, deal tracker with condition deadline alerts, dispute ticketing. Zero missed deadlines.

Tasks: BRK-M06-001 Offer Automation | BRK-M06-002 Document Signing | BRK-M06-003 Transaction Tracking | BRK-M06-004 Dispute Resolution — All detailed in Notion CSV.

M07 — Multi-Bot AI System — 10 Bots | Owner: Ma3 Thrilok — ELEVATED ROLE | Entity: BT

THE 10 BOTS:

- 1. Broker of Record Bot — RECO compliance assistant (Pankaj's daily co-pilot via WhatsApp)
- 2. Deal Administrator Bot — Transaction checklists and FINTRAC guidance (Mihail's daily co-pilot)
- 3. Agent/Salesperson Bot — SOPs, scripts, objection handling, market data 24/7
- 4. Compliance Check Bot — Runs every offer through compliance check before submission
- 5. Marketing Material Bot — Auto-generates all agent marketing content from listing address
- 6. Customer Engagement Bot — 24/7 consumer chat, lead qualification, website widget
- 7. Market Intelligence Bot — Daily market digest delivered to all agents every morning
- 8. AI Validation Bot — Tests every other AI output before delivery (confidence 0-100)
- 9. Agent Hiring Bot — Ivan's recruitment co-pilot for personalised 1-to-many outreach
- 10. Innovation Board Bot — Weekly automated CEO strategy brief every Monday 8am

ALL BOTS SHARE: Broko Brain (central RAG on Pinecone). Every answer cites source. Role-based access enforced. All interactions logged for continuous improvement. Validation Bot checks every output before delivery.

Tasks: BRK-M07-001 Broko Brain RAG | BRK-M07-002 BOR Bot + Deal Admin Bot | BRK-M07-003 Agent Bot + Compliance Bot + Hiring Bot | BRK-M07-004 Marketing Bot + Consumer Bot + Market Bot | BRK-M07-005 Validation Bot + Innovation Bot — All in Notion CSV.

M08 — Data, Privacy & Compliance | Owner: Br3 Mihail + Ma1 Praveen | Entity: BOTH

COMPLIANCE SPRINT — 1-2 DAYS DEDICATED SESSION REQUIRED IMMEDIATELY. CASL non-compliance = up to $10M fine. FINTRAC non-compliance = licence risk. PropTx VOW violation = data licence termination. These are existential risks.

COMPLIANCE REQUIREMENTS: PIPEDA · TRESA · FINTRAC · CASL · PropTx VOW rules · AODA (WCAG 2.1 AA) · Ontario Human Rights Code · Bill C-27 (PIPEDA modernisation — monitor)

Tasks: BRK-M08-001 Legal Compliance Framework | BRK-M08-002 Cybersecurity Infrastructure | BRK-M08-003 Proprietary Data Strategy — All detailed in Notion CSV.

M09 — Platform Infrastructure & DevOps | Owner: Ma1 Praveen | Entity: BT

TARGETS: 99.9% uptime SLA · LCP <2.5 seconds · API p95 <200ms · Auto-scaling · Multi-AZ deployment · Disaster recovery tested quarterly. Infrastructure must be enterprise-grade before SaaS launch.

COST TARGETS: Phase 1 (Months 1-2): AWS + AI under $3,500/month. Phase 2 (Months 3-4): under $8,000/month. Phase 3 (Months 5-6): under $15,000/month (scale justified by revenue). Claude prompt caching saves 40-60% on AI costs. Self-hosted n8n + Langfuse + Metabase saves $800-1,200/month.

Tasks: BRK-M09-001 AWS Performance | BRK-M09-002 CI/CD + API-First | BRK-M09-003 Cost Optimisation — All detailed in Notion CSV.

M10 — QA, Testing & Self-Healing | Owner: Ma9 Tantusree | Entity: BT

MANDATE: Zero unstable releases. Every bug triggers an RCA within 24 hours. Automated test generated from every bug. Same bug cannot reach production twice. Test suite is mandatory CI/CD gate.

TECHNOLOGY: Playwright (E2E + accessibility) · Pytest (API + ML) · k6 (load) · Detox (React Native) · Percy (visual regression) · Axe (AODA) · Sentry (error capture) · Linear (bug tracking)

Tasks: BRK-M10-001 Automated Test Suite | BRK-M10-002 RCA System + Self-Healing | BRK-M10-003 Production Stability Protocol — All detailed in Notion CSV.

M11 — Finance, Accounting & Seed Round | Owner: Br1 Pankaj | Entity: BOTH

FUNDRAISING: Target $25-35M seed round within 6 months. Pre-seed completed. CFO hire within 60 days is CRITICAL — investors will not write a $25-35M cheque without professional financial governance.

INVESTOR STORY: (1) Defensible tech moat — CMA ML model 2+ years proprietary development, (2) Self-learning platform — every interaction improves the AI, (3) Network effects — more agents → more data → better AI → more agents, (4) SaaS opportunity — every Ontario brokerage needs this, (5) Humanoid roadmap — first physical AI real estate agent globally

DEMO SEQUENCE FOR INVESTORS: Live CMA in 60 seconds (Thrilok/Vikas demo) → Compliance Bot answering RECO question → Offer prep in 5 minutes → Voice AI lead follow-up call → Software humanoid handling complete buyer journey

Tasks: BRK-M11-001 Financial Controls + CFO Hire | BRK-M11-002 Seed Round $25-35M — Both detailed in Notion CSV.

M12 — Humanoid & Future Tech R&D | Owner: Ma2 Vikas (CTO) | Entity: BT

HUMANOID ROADMAP: (1) Software bots already in development → (2) Multi-bot software humanoid demo for investors (Month 3-4) → (3) iPad kiosk open house bot pilot (Month 5-6) → (4) Physical humanoid agent (post-RECO approval, target 2027) → (5) Full AI real estate agent when compliance permits

The platform API layer is the humanoid brain. Each bot is one capability. The LangGraph orchestrator decides which capability to invoke for each task. The humanoid does not require any new intelligence — it inherits everything already built.

COMPLIANCE MONITORING: Thrilok and Mihail monitor RECO, CREA, and relevant provincial regulatory bodies for any rule changes that would permit or restrict AI agent autonomy. When regulations permit, the physical humanoid launches immediately.

Tasks: BRK-M12-001 Software Humanoid | BRK-M12-002 Open House Bot + Compliance Monitoring — Both detailed in Notion CSV.

CRITICAL HIRING GAPS

Role	Urgency	Why Critical	Who Owns Hire
CFO / Financial Controller	🔴 **Hire within 60 days**	Investors will not write $25-35M cheque without professional financial governance. Due diligence will expose gaps.	Br1 Pankaj (CEO personally)
DevOps Engineer	🔴 **Hire within 90 days**	Ma1 Praveen stretched across infrastructure + DevOps + data architecture. CI/CD pipeline needs dedicated owner to enable daily deployments.	Ma1 Praveen (defines spec)
Product Manager (Senior)	🟠 **Hire within 90 days**	Br2 David is an intern. A senior PM can run sprints, manage backlog, and own delivery accountability — freeing Pankaj from daily management.	Br1 Pankaj (CEO approves)
Marketing Manager (In-house)	🟠 **Hire within 120 days**	Brandlume is a vendor — no strategic ownership. Ma10 Megha is a strategist. A marketing manager owns execution, KPIs, and Brandlume management.	Ma10 Megha (defines spec)

SELF-IMPROVEMENT MANIFESTO

This platform is not finished when it is launched. It is finished when it no longer needs humans for any repetitive task. Every system we build must have a feedback loop. Every output must improve the next output. Every error must become a test. Every agent action must train the AI. Every deal outcome must retrain the model.

"Agents only sell. AI handles everything else."

— Broko AI Platform Principle
