M03 — Agent Recruitment & Operations							
BRK-M03-001	M03 — Agent Recruitment & Operations	Multi-channel campaign targeting licensed Ontario agents — LinkedIn Meta referral direct outreach	Sales-Mgr Br4 Ivan	S1	Critical	Not Started	M03.2 — Agent value prop deck and CMA demo ready
BRK-M03-002	M03 — Agent Recruitment & Operations	Automated digital onboarding: RECO verification, E&O check, platform access, training assignment	Admin Br3 Mihail	S1	Critical	Not Started	M05.1 — CMA demo ready — this is the recruitment hook
BRK-M03-003	M03 — Agent Recruitment & Operations	Self-serve AI training: platform usage, RECO compliance, scripts, objection handling, market knowledge	Admin Br3 Mihail	S2	High	Not Started	M07 — Training Bot live | M07.1 — Broko Brain with RECO content loaded
BRK-M03-004	M03 — Agent Recruitment & Operations	Real-time performance stats, commission tracking, leaderboard, inactivity alerts, milestone rewards	Tech-Lead Ma4 Debasis	S2	High	Not Started	M02.5 — CRM dashboards live | M11.1 — Commission tracking live
M04 — Consumer Platform — broko.ai							
BRK-M04-001	M04 — Consumer Platform — broko.ai	Hero redesign Bestimate as primary CTA, above-fold lead capture, social proof, mobile nav fix	Frontend Ma7 Subhashis	S1	Critical	Not Started	None — Week 1 priority
BRK-M04-002	M04 — Consumer Platform — broko.ai	ToU gate before MLS data, sold listings behind login, footer branding fix, FINTRAC docs, data retention	Tech-Lead Ma4 Debasis	S1	Critical	Not Started	None — legal risk exists today — immediate action required
BRK-M04-003	M04 — Consumer Platform — broko.ai	Natural language property search — complete QA with 100+ test queries and deploy to production	Frontend Ma7 Subhashis	S1	Critical	Not Started	M04.1 — Homepage stable and performing
BRK-M04-004	M04 — Consumer Platform — broko.ai	500+ auto-generated neighbourhood landing pages using MLS data and Claude AI content	Tech-Lead Ma4 Debasis	S2	High	Not Started	M04.1 — Homepage stable | M04.3 — Search live
BRK-M04-005	M04 — Consumer Platform — broko.ai	Floating 24/7 AI chat for lead qualification and capture plus prominent iOS/Android app badges	Tech-Lead Ma4 Debasis	S2	High	Not Started	M07 — Customer Engagement Bot live
BRK-M04-006	M04 — Consumer Platform — broko.ai	Full WCAG 2.1 Level AA compliance — keyboard nav, screen reader, contrast, alt text, accessible forms	QA Ma9 Tantusree	S2	Critical	Not Started	M04.1 — Homepage fixes complete
M05 — CMA & Property Intelligence							

Ticket ID	Module	Task	Owner	Sprint	Priority	Status	Dependencies
BRK-M05-001	M05 — CMA & Property Intelligence	Audit all three model pillars vs actual sold prices, identify error patterns, retrain systematically	AI-ML Ma3 Thrilok	S1	■ Critical	Not Started	None — immediate Week 1 priority — Thrilok leads this from Day 1
BRK-M05-002	M05 — CMA & Property Intelligence	Branded PDF and digital CMA report — professional output in under 10 seconds for agent sharing	AI-ML Ma3 Thrilok	S1	■ Critical	Not Started	M05.1 — CMA accuracy improved to acceptable level
BRK-M05-003	M05 — CMA & Property Intelligence	Enforce data boundary: VOW and MLS data stays on AWS — Claude used only for non-sensitive reasoning	Head-Tech Ma1 Praveen	S1	■ Critical	Not Started	None — architecture decision must precede all AI development work
BRK-M05-004	M05 — CMA & Property Intelligence	Real-time alerts to agents and clients on price changes, new listings, market condition shifts	Tech-Lead Ma4 Debasis	S1	■ Critical	Not Started	M05.1 — CMA live | M02.1 — CRM live
BRK-M05-005	M05 — CMA & Property Intelligence	Agent rating system on every CMA output triggers automatic weekly model retraining pipeline	AI-ML Ma3 Thrilok	S2	■ Critical	Not Started	M05.2 — CMA reports live in agent portal
BRK-M05-006	M05 — CMA & Property Intelligence	AI renovation cost estimates per item plus automated school transit walkability data on every listing	AI-ML Ma3 Thrilok	S2	■ High	Not Started	M05.2 — CMA reports live
M06 — Transaction & Deal Management							
BRK-M06-001	M06 — Transaction & Deal Management	AI auto-fills OREA offer documents from CRM data — agent reviews in 5 minutes and submits	AI-ML Ma3 Thrilok	S2	■ Critical	Not Started	M02.5 — CRM live | M05.1 — CMA live
BRK-M06-002	M06 — Transaction & Deal Management	E-signature integration for all transaction documents plus encrypted deal file management on AWS	Tech-Lead Ma4 Debasis	S2	■ Critical	Not Started	M06.1 — Offer preparation live
BRK-M06-003	M06 — Transaction & Deal Management	End-to-end deal tracker with automated reminders at every stage from accepted offer to closing	Tech-Lead Ma4 Debasis	S2	■ Critical	Not Started	M06.2 — Document signing live
BRK-M06-004	M06 — Transaction & Deal Management	Logged dispute management with SLA tracking, escalation workflows, full audit trail	Admin Br3 Mihail	S2	■ High	Not Started	M06.3 — Transaction management live
M07 — Multi-Bot AI System							
BRK-M07-001	M07 — Multi-Bot AI System	Central intelligence: RECO rules, OREA forms, SOPs, MLS market data, past deals as searchable embeddings	AI-ML Ma3 Thrilok	S2	■ Critical	Not Started	M08.3 — Data architecture and security defined
BRK-M07-002	M07 — Multi-Bot AI System	BOR compliance assistant and admin deal tracking bot — Pankaj and Mihail's daily AI co-pilots	AI-ML Ma3 Thrilok	S2	■ Critical	Not Started	M07.1 — Broko Brain live with RECO content loaded
BRK-M07-003	M07 — Multi-Bot AI System	Three agent-facing bots: daily assistant, compliance validator for offers, recruitment tool for Ivan	AI-ML Ma3 Thrilok	S2	■ Critical	Not Started	M07.1 — Broko Brain live | M03.2 — Agent onboarding live
BRK-M07-004	M07 — Multi-Bot AI System	Content generation, 24/7 consumer chat, market data delivery — three bots running simultaneously	AI-ML Ma3 Thrilok	S3	■ High	Not Started	M07.1 — Broko Brain live | M04.5 — Chat widget built
BRK-M07-005	M07 — Multi-Bot AI System	AI tests every other AI output before delivery + weekly automated strategy intelligence for CEO	AI-ML Ma3 Thrilok	S3	■ Critical	Not Started	M07.1-M07.4 — All bots live
M08 — Data, Privacy & Compliance							
BRK-M08-001	M08 — Data, Privacy & Compliance	Complete compliance: PIPEDA, TRESA, FINTRAC, CASL, VOW rules, AODA, Human Rights Code	Admin Br3 Mihail	S1	■ Critical	Not Started	None — compliance sprint must happen before any scaling begins
BRK-M08-002	M08 — Data, Privacy & Compliance	WAF, DDoS, anti-scraping, Zero Trust, MFA everywhere, audit logs, pen testing, dependency scanning	Head-Tech Ma1 Praveen	S1	■ Critical	Not Started	M08.1 — Compliance framework documented
BRK-M08-003	M08 — Data, Privacy & Compliance	Architecture and governance for accumulating Broko-specific data as long-term competitive advantage	CEO Br1 Pankaj	S2	■ High	Not Started	M08.1-M08.2 — Compliance and security infrastructure live
M09 — Platform Infrastructure & DevOps							
BRK-M09-001	M09 — Platform Infrastructure & DevOps	99.9% uptime, LCP <2.5s, API <200ms p95, auto-scaling, multi-AZ, disaster recovery documented	Head-Tech Ma1 Praveen	S1	■ Critical	Not Started	None
BRK-M09-002	M09 — Platform Infrastructure & DevOps	Fully automated build-test-deploy pipeline plus API-first refactor enabling future SaaS multi-tenancy	Tech-Lead Ma4 Debasis	S2	■ High	Not Started	M10 — QA framework and automated test suite built first
BRK-M09-003	M09 — Platform Infrastructure & DevOps	Systematic AWS cost reduction: prompt caching, Reserved Instances, Spot training, self-hosted tools	Head-Tech Ma1 Praveen	S2	■ High	Not Started	M09.1 — Infrastructure stable and monitored
M10 — QA, Testing & Self-Healing							
BRK-M10-001	M10 — QA, Testing & Self-Healing	E2E browser tests, API tests, load tests, mobile tests, visual regression, accessibility tests	QA Ma9 Tantusree	S1	■ Critical	Not Started	M09.2 — CI/CD pipeline live
BRK-M10-002	M10 — QA, Testing & Self-Healing	Every bug: logged → 24hr RCA → fix → automated test generated → same bug can never reach production again	QA Ma9 Tantusree	S1	■ Critical	Not Started	M10.1 — Test suite live | Ticketing system live
BRK-M10-003	M10 — QA, Testing & Self-Healing	Zero unstable releases: mandatory pre-release gates, post-deploy regression, instant rollback	QA Ma9 Tantusree	S1	■ Critical	Not Started	M10.1 — Test suite | M09.2 — CI/CD pipeline
M11 — Finance, Accounting & Seed Round							
BRK-M11-001	M11 — Finance, Accounting & Seed Round	Commission tracking, burn rate monitoring, P&L, investor reporting plus CFO hired before raise	CEO Br1 Pankaj	S1	■ Critical	Not Started	M02.5 — CRM live for commission data

Ticket ID	Module	Task	Owner	Sprint	Priority	Status	Dependencies
BRK-M11-002	**M11 — Finance, Accounting & Seed Round**	Pitch deck, live product demo, traction metrics, data room, investor outreach for $25-35M raise	CEO Br1 Pankaj	S2	■ **Critical**	Not Started	M05.1 — CMA live | M02.5 — CRM live | M07.2 — BOR Bot live | Traction data required
M12 — Humanoid & Future Tech R&D							
BRK-M12-001	**M12 — Humanoid & Future Tech R&D**	AI system that simulates any brokerage role: BOR, admin, agent, customer service, transaction manager	CTO Ma2 Vikas	S3	■ **High**	Not Started	M07 — All bots live | M09.2 — API-first architecture complete
BRK-M12-002	**M12 — Humanoid & Future Tech R&D**	Physical open house bot on tablet kiosk plus ongoing RECO/CREA monitoring for humanoid launch	AI-ML Ma3 Thrilok	S4	■ **High**	Not Started	M12.1 — Software humanoid v1 working

DISCUSSION POINTS — PER TASK

Use these in your 6-minute check-ins. 10 discussion points per task for focused team meetings.

Ticket ID	Task	Owner	Discussion Points for Meeting
M01 — Marketing & Brand			
BRK-M01-001	Keyword research, on-page SEO, neighbourhood guides, Broko Pulse articles, programmatic pages	Mktg-Strat Ma10 Megha	1. 1.What leads per month is Brandlume generating? 2.What is cost per lead Google vs Meta? 3.Which neighbourhoods get most traffic today? 4.Is Broko Pulse updated regularly? 5.What keywords are competitors ranking for that we are not? 6.How long does Megha take to approve content? 7.Can Haresh handle daily posting alone? 8.What is our domain authority score? 9.Are neighbourhood pages built or stil...

FEEDBACK LOOPS • RISKS • GROWTH OPPORTUNITIES

Ticket	Task	Feedback & Self-Learning Loop	Loopholes & Risks	Growth Opportunity	Automation Opportunity
M01 — Marketing & Brand					
BRK-M01-001	Keyword research, on-page SEO, neighbourhood guides, Broko Pulse articles, programmatic pages	SEO performance data auto-fed to Claude weekly via Semrush API → Claude generates new keyword targets and content calendar → Megha approves → Haresh executes. Loop runs every 7 days automatically.	Brandlume may not follow brief without internal oversight. LLM context limits mean Semrush data must be chunked before feeding to Claude. Content may become repetitive without diversity checks built into the loop.	Programmatic SEO can generate 1000+ neighbourhood pages automatically. AI market reports become PR assets and earn backlinks from media outlets. Each page is an evergreen lead generation asset.	Content briefs, meta descriptions, image alt text, internal linking — all automated via Claude + n8n. Human needed only for final quality gate.
BRK-M01-002	Google Search Display Meta lead gen campaigns, AI creative testing, auto-pause underperformers	Ad performance pulled via API daily → Claude analyses patterns → generates new ad copy variants → Brandlume implements top recommendations weekly. Winning creative patterns feed next month strategy.	Ad fatigue sets in after 2-3 weeks — creative must refresh constantly. Meta algorithm changes can kill performance overnight. No in-house person watching ads daily is a major risk for a $10K/month spend.	AI creative testing can run 20+ variants simultaneously. Retargeting Bestimate users is a high-converting untapped audience. Lookalike audiences from converted leads can scale efficiently.	Ad copy generation, audience segmentation, performance reporting, creative variant production — all automated. Human approves budget changes and strategic direction only.
BRK-M01-003	Daily posts, reels, agent spotlights, market updates, AI-generated video across all platforms	Engagement data (likes shares saves comments) fed to Claude weekly → identifies top content types and optimal posting times → generates next week calendar optimised for engagement. A/B test post formats monthly.	Social algorithms change frequently. HeyGen AI videos may feel generic without personalisation layer. Single person managing all platforms is a single point of failure for content pipeline.	Daily market update videos build Broko as the go-to Ontario real estate authority. Agent spotlight reels are proven recruitment tools — prospects see happy agents and want to join immediately.	Caption writing, scheduling, hashtag research, performance reporting, content calendar creation — all automated. Human needed only for brand voice review and community management responses.
BRK-M01-004	Per-agent branded templates, listing posts, flyers, email signatures — auto-generated on onboarding	Agent usage data (which templates used most frequently) feeds back to Sujit → redesign underused templates quarterly. Claude learns agent tone preferences and personalises copy over time.	Canva API has rate limits — batch generation needs throttling logic. Poor agent photo quality makes branded materials look unprofessional. Templates become outdated if brand evolves without systematic update process.	This becomes a major SaaS feature — every brokerage client gets auto-generated agent kits. Could charge $50/agent/month for white-label version. Huge agent retention and recruitment tool.	Bio writing, template population, material generation, email signature creation — fully automated. Human reviews only first batch per agent for quality.
BRK-M01-005	Weekly AI competitor analysis, brand sentiment monitoring, innovation ideas, marketing advisor bot	Innovation board output quality improves as more competitive data is ingested. After 3 months Claude builds pattern recognition on what competitors do before Broko responds. Becomes predictive not reactive intelligence.	Competitor scraping may violate ToS if too aggressive — use official APIs and public data only. Innovation ideas need human strategic filter — not all AI suggestions are sound. Google Reviews sentiment can be gamed by bad actors.	Real-time competitor ad monitoring via Meta Ad Library API reveals their exact targeting strategy. Sentiment analysis can predict agent churn before it escalates. Innovation board recommendations become agenda for weekly leadership meeting.	Competitor research, brand mention monitoring, weekly report generation, trend analysis — fully automated. CEO spends 30 minutes reviewing not 3 hours researching manually.
M02 — Lead Generation & CRM					
BRK-M02-001	Website forms, Meta Ads API, Google Ads API — all leads auto-flow into CRM within 60 seconds	Lead source performance tracked weekly → underperforming channels paused → budget shifted to winners via n8n rules. Claude analyses lead quality by source monthly and recommends budget reallocation automatically.	API rate limits from Meta and Google cause lead delays during high volume periods. Duplicate leads across channels need deduplication logic. CASL consent must be captured at every lead entry point.	Behavioural data from lead capture (time spent pages viewed before submitting) trains AI to predict buyer intent before form submission. This becomes a predictive lead scoring advantage over competitors.	Lead capture, deduplication, CRM entry, agent notification — fully automated. Zero human touchpoints from ad click to agent ping.
BRK-M02-002	Score every lead 0-100, classify Hot/Warm/Cold plus portal/non-portal/unverified tiers	Every lead outcome (contacted converted lost) logged as training signal → model retrains weekly → accuracy improves continuously. After 6 months model knows Broko-specific buyer patterns competitors cannot replicate.	Cold start problem — model needs 200+ labelled leads before predictions are reliable. Local ML models have context window limits — behavioural sequences longer than 30 days need special handling. Model can develop geographic bias.	Predictive scoring identifies leads about to transact before they contact an agent — enables proactive outreach at perfect moment. Score trends over 2 weeks more valuable than single-point scores.	Lead scoring, tier classification, agent assignment recommendation, behaviour-triggered rescoring — fully automated. Thrilok reviews accuracy weekly.
BRK-M02-003	Auto-assign leads by location, property type, price range, availability — with SLA tracking and esca	Agent response time and conversion rate per lead type tracked → assignment algorithm evolves to match best agent to each lead type automatically. Top responders earn priority routing — healthy competition.	Round-robin unfair if territories differ in lead volume. New agents need leads to build experience but have lower conversion — balance required. Agent availability (vacation sick) must be tracked or leads go unanswered.	Agent performance scoring creates natural accountability. This data becomes basis for coaching conversations and retention decisions. Distribution data shows which lead types convert best with which agent profiles.	Lead routing, SLA timer, escalation trigger, assignment notification — fully automated. Ivan reviews assignment rules monthly not daily.
BRK-M02-004	Personalised automated sequences triggered by lead behaviour — CASL compliant throughout	Open rates, click rates, reply rates fed to Claude weekly → underperforming sequences paused → new variants generated → tested against control group. Continuous A/B testing runs automatically without human intervention.	CASL requires express consent for marketing messages — must be at lead entry point. WhatsApp Business API has template approval delays of 1-3 days. Over-messaging causes permanent number blocking.	Behaviour-triggered messages (lead viewed same listing 3 times → price alert) convert at 5x higher than scheduled sequences. This personalisation at scale is impossible without AI.	Message sending, personalisation, sequence management, unsubscribe handling, performance tracking — fully automated. Human writes templates once and reviews monthly.
BRK-M02-005	RBAC dashboards: Admin, Team Lead, Realtor, Accounting, Reception — enforced at API not just UI	Dashboard usage patterns tracked via Microsoft Clarity → most-used widgets kept, unused removed quarterly. Agent feedback on dashboard collected monthly → Claude prioritises UI improvements for next sprint.	Context window limits mean AI cannot analyse full historical CRM data in one call — must use chunked analysis. Data isolation bugs could expose client PII — critical security requirement. Dashboard performance degrades with large datasets without proper indexing strategy.	Dashboards become the core SaaS product — every external brokerage gets the same role-based views with their branding. This is the centre of the $25-35M valuation story — recurring SaaS revenue.	Dashboard rendering, data aggregation, real-time updates, notification badges — fully automated. Human customises widget preferences only.
BRK-M02-006	AI voice calls hot leads within 60 seconds of capture, qualifies, books agent callback automatically	Call transcripts analysed by Claude weekly → most effective qualifying questions identified → script updated monthly. Conversion rate per script version tracked — best version becomes permanent standard.	Voice AI can sound robotic — ElevenLabs quality must be tested extensively with real users. AI caller must disclose it is an AI assistant — CRTC requirement. Call timing matters — wrong time of day significantly reduces conversion.	60-second response to hot leads is impossible for humans at scale — AI voice gives Broko unbeatable speed-to-lead advantage. This single feature can increase hot lead conversion by 40-60% based on industry benchmarks.	Call initiation, transcription, CRM logging, agent notification, callback scheduling — fully automated. Agent handles only when human escalation triggered.
M03 — Agent Recruitment & Operations					
BRK-M03-001	Multi-channel campaign targeting licensed Ontario agents — LinkedIn Meta referral direct outreach	Recruitment campaign performance (applications, interviews, signed agents) feeds to Claude monthly → message and targeting refined → next month campaign improves. Track which channels produce agents who stay longest.	New brand with no track record makes recruitment harder — agents are risk-averse. Without CMA demo ready, value prop is weak. Recruiting too fast before tech is ready creates bad first impression and early churn.	Agents who join early become advocates and refer colleagues — viral recruitment effect if first 10 agents are genuinely happy. LinkedIn outreach to agents publicly frustrated with their current brokerage is highest ROI channel.	Initial outreach message generation, follow-up sequences, application tracking, interview scheduling — automated. Ivan focuses only on relationship conversations.
BRK-M03-002	Automated digital onboarding: RECO verification, E&O check, platform access, training assignment	Onboarding completion rate and time tracked → bottlenecks identified → flow improved monthly. Agent first-week activity (logins, CMA runs, leads contacted) predicts long-term retention accurately.	RECO verification API availability — may need manual fallback process. E&O insurance verification requires document review. DocuSign per-envelope costs grow significantly with agent count at scale.	Onboarding flow becomes SaaS feature — other brokerages pay to use it. White-label onboarding portal for any Ontario brokerage could be standalone product at $200/agent onboarded.	RECO status check, agreement sending, portal account creation, training module assignment, welcome communications — all automated. Mihail reviews exceptions only.
BRK-M03-003	Self-serve AI training: platform usage, RECO compliance, scripts, objection handling, market knowled	Questions agents ask bot are logged → most frequent become new training modules → knowledge base grows automatically. Agent quiz scores tracked → struggling agents flagged for additional coaching support.	RAG context window limits mean bot cannot hold entire RECO Act in context — must use chunked retrieval with smart summarisation. Training content can become outdated when RECO updates rules — needs auto-refresh trigger.	Training Bot becomes SaaS product feature — every brokerage client gets it pre-loaded with RECO Ontario content. Could add provincial knowledge bases for BC Alberta expansion. Reduces compliance training cost by 80% for any brokerage.	Question answering, quiz generation, progress tracking, completion certificates, knowledge base updates — automated. Mihail reviews unanswered questions weekly.

Ticket	Task	Feedback & Self-Learning Loop	Loopholes & Risks	Growth Opportunity	Automation Opportunity
BRK-M03-004	Real-time performance stats, commission tracking, leaderboard, inactivity alerts, milestone rewards	Agent performance trends tracked monthly → agents improving get recognition → agents declining get proactive coaching outreach from Ivan automatically. Churn prediction model built after 3 months of performance data.	Gamification can create unhealthy competition if poorly designed. Commission calculations must be 100% accurate — errors destroy trust immediately and are very hard to recover from. Leaderboard visibility of others' earnings can cause significant team friction.	Performance data becomes retention tool — agents who can see their own growth trajectory stay longer. Top performer data is powerful recruitment collateral — shows prospects what is achievable at Broko with the tech stack.	Commission calculation, performance metric aggregation, leaderboard updates, inactivity alerts, milestone notifications — automated. Ivan reviews retention risks flagged by system weekly.
M04 — Consumer Platform — broko.ai					
BRK-M04-001	Hero redesign Bestimate as primary CTA, above-fold lead capture, social proof, mobile nav fix	Hotjar heatmaps and session recordings analysed by Claude weekly → identifies exactly where users drop off → Subhashis makes targeted fixes → conversion rate tracked. Continuous optimisation loop running permanently.	A/B testing requires sufficient traffic to reach statistical significance — with low traffic test results can be misleading. Too many CTAs creates decision paralysis and reduces all conversion rates. Hero redesign risks breaking current SEO if title tags and H1 not handled carefully.	Even a 0.5% improvement in homepage conversion at current traffic means 5-10 more leads per month. At scale with paid traffic the same improvement is worth $50K+ annually. Highest ROI development work possible.	Hotjar analysis, A/B test setup, performance monitoring, Core Web Vitals reporting — automated. Subhashis implements changes based on AI-generated recommendations.
BRK-M04-002	ToU gate before MLS data, sold listings behind login, footer branding fix, FINTRAC docs, data retent	Compliance requirements monitored via RECO and PropTx update feeds → when new requirements published Mihail flagged within 48 hours → compliance checklist updated → Debasis implements within 30 days.	VOW rules change periodically. Footer branding error means marketing materials may also be incorrect. Missing ToU gate exposes Broko to PropTx data licence termination — would take down the entire website.	Getting compliance right now means zero disruption when scaling to 100 agents and SaaS clients. Compliance-first reputation is a selling point to risk-averse brokerages considering the SaaS product.	ToU consent recording, data retention enforcement, compliance status monitoring — automated. Mihail and legal counsel review quarterly.
BRK-M04-003	Natural language property search — complete QA with 100+ test queries and deploy to production	Search queries logged anonymously → Claude analyses weekly what users search for but cannot find → MLS gaps identified → content and filter improvements prioritised. Search success rate improves continuously.	LLM context window limits mean very complex multi-condition searches may timeout or return incomplete results. Natural language parsing of Canadian real estate terminology needs domain-specific tuning. Search results must comply with VOW — not all MLS data shown to unregistered users.	Free-flow search is the most powerful consumer differentiator — no other Ontario portal offers this. First mover advantage must be capitalised immediately with marketing announcement at launch. Could be featured in real estate industry press.	Query parsing, MLS data retrieval, result ranking, search logging — automated. Thrilok monitors query failure rate weekly.
BRK-M04-004	500+ auto-generated neighbourhood landing pages using MLS data and Claude AI content	MLS data on each page auto-updates as new sales close. Page performance tracked in Google Search Console → poorly ranking pages given additional unique content → top ranking templates replicated for new areas.	Google may penalise thin AI-generated content without genuine unique value — each page must have meaningful local data not just templated text. Duplicate content risk if pages are too similar across similar neighbourhoods.	Neighbourhood pages can rank for thousands of long-tail keywords. At scale 10% of pages ranking in top 3 means hundreds of additional monthly organic leads. Each page is a permanent asset that compounds over time.	Page generation, content creation, meta data population, internal linking, sitemap updates — fully automated. SEO review of top 20 performing pages by Brandlume monthly.
BRK-M04-005	Floating 24/7 AI chat for lead qualification and capture plus prominent iOS/Android app badges	Chat conversation patterns analysed monthly → most effective qualifying questions identified → bot script updated. Conversion rate from chat to lead tracked and optimised continuously.	Chat bot frustrates users if it cannot answer their questions — must have graceful handoff to human. Chat widget can slow page load if not lazy-loaded correctly. App badges useless if app store ratings are poor.	Chat available 24/7 when agents are sleeping — captures leads from late-night property browsers who represent 30% of serious buyers. App download creates loyal repeat users vs one-time website visitors.	Chat qualification, lead capture, CRM logging, agent notification, conversation transcription — automated. Agent handles only when human escalation triggered.
BRK-M04-006	Full WCAG 2.1 Level AA compliance — keyboard nav, screen reader, contrast, alt text, accessible form	Accessibility test results logged monthly → new violations flagged immediately → fixed before next sprint. Axe in CI/CD means zero new violations reach production automatically.	AODA compliance is legal requirement in Ontario — non-compliance can result in fines and human rights complaints. AI-generated content must also be accessible — alt text generation needed for all images. Screen reader testing must use real assistive technology not just automated tools.	Accessibility improvements benefit all users — better keyboard navigation and clearer copy improve conversion for everyone. Accessible platform differentiates for institutional clients and SaaS prospects with compliance requirements.	Accessibility scanning on every build, alt text generation for all images, colour contrast checking — automated. Tantusree manually tests with screen reader monthly.
M05 — CMA & Property Intelligence					
BRK-M05-001	Audit all three model pillars vs actual sold prices, identify error patterns, retrain systematically	Agent ratings on each CMA automatically retrain model weekly via MLflow pipeline. Accuracy dashboard shows improvement trend. Target 99% accuracy in 6 months. Model improves faster as feedback accumulates.	Local ML models have fixed context — cannot process unstructured data like renovation quality without feature engineering. Model accuracy degrades in fast-moving markets — needs market condition detection layer. Small sample sizes for luxury properties cause high variance predictions.	99% CMA accuracy becomes a defensible investor-facing marketing claim. Each improvement compounds — Broko model gets better relative to competitors who start fresh. Proprietary sold data plus feedback loop creates uncopiable moat.	Model evaluation, retraining pipeline, accuracy metric tracking, error analysis reports — automated via MLflow. Thrilok reviews results and makes architectural decisions weekly.
BRK-M05-002	Branded PDF and digital CMA report — professional output in under 10 seconds for agent sharing	Report quality improves as Claude learns from agent edits — if agents consistently change certain phrases Claude adapts. Template updated quarterly based on agent feedback collected automatically.	Claude API has token limits — very complex properties with many comparables need summarisation before sending. PDF generation latency spikes under load — needs async processing with status indicator for agent UX.	Beautiful branded CMA report is the single most powerful agent recruitment demo. Show a prospect agent a Broko CMA vs their current manual process — conversion to Broko is immediate. This is also a SaaS premium feature worth additional MRR.	Comparable selection, narrative writing, PDF generation, branded output, email delivery — fully automated. Agent reviews and sends with one click.
BRK-M05-003	Enforce data boundary: VOW and MLS data stays on AWS — Claude used only for non-sensitive reasoning	Data boundary compliance tested on every deployment — automated test checks no prohibited data reaches Claude API. Audit log of all AI API calls reviewed monthly by Praveen. Boundary updated if CREA rules change.	This is most technically complex compliance requirement. Developers may accidentally send prohibited data to Claude if boundaries not enforced at infrastructure level not just code level. Context window of Claude means even summarised MLS data could be problematic.	AWS-only data processing creates proprietary environment competitors cannot access. As model improves on private data the gap between Broko AI and generic real estate AI widens every month permanently.	Data boundary monitoring, access logging, prohibited data detection, compliance reporting — automated. Praveen reviews monthly audit report.
BRK-M05-004	Real-time alerts to agents and clients on price changes, new listings, market condition shifts	Alert engagement rates tracked (opened clicked acted on) → alert types with low engagement paused → high-engagement types expanded. Alert timing optimised by day and time based on historical engagement patterns.	High-volume alert periods can overwhelm delivery systems — needs queue management and back-pressure handling. Too many alerts causes notification fatigue — clients unsubscribe permanently. Relevance must be personalised.	Hyper-personalised price alerts (property matching exact buyer criteria drops in price) are premium feature. Alert engagement data shows buyer urgency — highest intent leads to prioritise for immediate agent contact.	Alert triggering, personalisation, delivery across all channels, retry logic, engagement tracking — fully automated. Debasis reviews delivery failure rates weekly.
BRK-M05-005	Agent rating system on every CMA output triggers automatic weekly model retraining pipeline	This IS the self-improvement loop. Agent feedback is the most valuable training signal — they know the local market. Loop: feedback → retrain → improve → agents trust model more → more feedback → better model. Virtuous cycle.	Agent feedback quality varies — some rate inaccurately or without care. Small feedback volumes per property type mean retraining may overfit to common types. Cold start — need minimum 50 ratings before first retrain is meaningful.	After 6 months this loop running, Broko CMA will be the most accurate in Ontario — provable claim for investor pitch. No competitor can replicate this without same feedback infrastructure and time investment — true moat.	Rating collection, data labelling, retraining trigger, model evaluation, deployment of improved model — fully automated. Thrilok reviews accuracy report weekly and approves major model updates.
BRK-M05-006	AI renovation cost estimates per item plus automated school transit walkability data on every listin	Renovation costs calibrated against actual contractor quotes over time — as agents report real renovation costs on deals model improves. Neighbourhood data freshness tracked — stale data flagged automatically for refresh.	Renovation costs vary significantly by contractor and neighbourhood — estimates must show ranges not single figures to avoid liability. Google Places API costs grow with usage — caching strategy essential. School data APIs for Canada are less comprehensive than US equivalents.	Renovation cost estimator is a unique feature no Ontario competitor offers. Helps buyers understand true cost of ownership. For sellers shows how renovation investment translates to price uplift — powerful listing tool and CMA enhancement.	Renovation cost calculation, neighbourhood data aggregation, AI summary writing, data refresh scheduling — fully automated. Thrilok reviews data accuracy quarterly.
M06 — Transaction & Deal Management					
BRK-M06-001	AI auto-fills OREA offer documents from CRM data — agent reviews in 5 minutes and submits	Offer errors tracked (wrong date missing clause incorrect deposit) → common errors become validation rules → auto-caught before agent sees draft. Error rate tracked monthly — target zero critical errors.	OREA forms updated periodically — system must detect new form versions and update templates automatically or offers become non-compliant. Claude can misinterpret complex conditional clauses — all AI legal text needs human review.	Offer automation is #1 agent time-saver — 45 minutes saved per offer × 5 offers per month × 30 agents = 225 agent hours saved monthly. Most compelling ROI demonstration for both agent recruitment and SaaS sales.	Form field population, standard clause insertion, document assembly, missing field detection — automated. Agent reviews material terms only. Mihail spot-checks 10% of offers monthly.

Ticket	Task	Feedback & Self-Learning Loop	Loopholes & Risks	Growth Opportunity	Automation Opportunity
BRK-M06-002	E-signature integration for all transaction documents plus encrypted deal file management on AWS	Document completion rates tracked per deal stage → bottleneck stages identified → reminder frequency adjusted → completion speed improves. Overdue signing rates reduce as system learns optimal reminder timing.	DocuSign per-envelope pricing grows significantly with scale — evaluate Signwell as cost-effective alternative early. E-signature legal validity in Ontario must be confirmed for all document types. Some clients not comfortable with e-signing large transactions.	Complete digital deal file creates audit trail for RECO inspections and reduces lost document risk. Deal file completeness score shown to BOR as real-time compliance dashboard — first of its kind in Ontario proptech.	Document routing, signing reminders, signature tracking, deal file updates, completion notifications — fully automated. Mihail reviews unsigned document alerts daily.
BRK-M06-003	End-to-end deal tracker with automated reminders at every stage from accepted offer to closing	Condition waiver deadlines tracked with 72 48 24 4 hour escalating alerts. Close date performance tracked — average days from accepted offer to close improves as bottlenecks identified and removed systematically.	Integration with lawyers requires them to use system or receive automated emails — adoption by external parties is a challenge. Condition deadlines in Ontario real estate are legally binding — system must be 100% accurate. Time zone handling critical.	Deal tracking data shows which agent-lawyer combinations close fastest — intelligence for future deal routing recommendations. Pipeline value visible to CEO in real-time creates investor-grade financial forecasting capability.	Stage progression tracking, reminder generation and delivery, deadline monitoring, escalation triggers, closing checklist — automated. Mihail reviews overdue stages daily.
BRK-M06-004	Logged dispute management with SLA tracking, escalation workflows, full audit trail	Dispute patterns analysed quarterly by Claude → systemic issues identified → process improvements made → dispute rate tracked trending down over time. Resolution time improves as playbooks built from past resolutions.	Dispute logging everything creates double-edged sword — good for defence bad if used against Broko. Some disputes require legal counsel — system cannot fully automate. Escalation to CEO for every P0 may overwhelm Pankaj as volume grows.	Low dispute rate becomes trust signal for SaaS clients — shows platform quality. Dispute data reveals systemic process failures before they become widespread expensive problems.	Ticket creation, SLA timer, escalation trigger, resolution logging, RCA initiation — automated. Mihail and David manage day-to-day. Pankaj reviews weekly summary.
M07 — Multi-Bot AI System					
BRK-M07-001	Central intelligence: RECO rules, OREA forms, SOPs, MLS market data, past deals as searchable embedd	Knowledge base quality improves as more documents ingested and queries answered. Low-confidence answers flagged → human provides correct answer → fed back as training example. Knowledge gaps identified weekly from query logs.	Pinecone context window limits — documents must be chunked at meaningful boundaries not arbitrary character counts. Retrieval relevance degrades with very large knowledge bases without careful indexing strategy. Embedding model choice significantly affects retrieval quality.	Broko Brain becomes the competitive moat — more Broko-specific knowledge loaded the better every bot performs. External brokerages pay for SaaS get access to Broko Brain with their own SOP layer on top. This is core IP of SaaS product.	Document ingestion, chunking, embedding generation, index updates, freshness monitoring, query logging — automated. Thrilok reviews retrieval quality monthly using evaluation dataset.
BRK-M07-002	BOR compliance assistant and admin deal tracking bot — Pankaj and Mihail's daily AI co-pilots	Every BOR Bot query logged → most frequent compliance questions become priority SOP documentation → knowledge base improves weekly. Deal admin bot tracks completion rates → identifies which stages cause most delays.	BOR Bot must never give legal advice — guardrails must be extremely robust as consequences of wrong advice are severe. RECO rules have nuances requiring interpretation — bot may oversimplify complex situations. Claude context limits mean long regulatory documents need careful chunking.	BOR Bot enables Pankaj to answer agent compliance questions in seconds rather than 30 minutes researching — massive CEO time recovery. Deal Admin Bot eliminates Mihail's manual checklist work — she focuses on exceptions only.	Compliance Q&A, source citation, deal checklist generation, deadline tracking, FINTRAC form guidance — automated. Pankaj reviews bot accuracy weekly for first month then monthly.
BRK-M07-003	Three agent-facing bots: daily assistant, compliance validator for offers, recruitment tool for Ivan	Agent Bot query patterns reveal knowledge gaps → new training content created automatically. Compliance Check Bot error patterns improve with every corrected output. Hiring Bot learns which outreach messages get responses and refines.	Compliance Check Bot must update every time OREA releases new form versions. Agent Bot may give inconsistent answers if knowledge base has conflicting information. Hiring Bot outreach at scale may trigger LinkedIn spam filters.	Compliance Check Bot eliminates major source of transaction errors and protects Pankaj as BOR from liability. Hiring Bot enables Ivan to run personalised outreach to 100 agents simultaneously — impossible manually.	Compliance checking, issue flagging, agent Q&A, recruitment outreach personalisation — automated. Ivan and Mihail review bot outputs weekly for quality.
BRK-M07-004	Content generation, 24/7 consumer chat, market data delivery — three bots running simultaneously	Consumer Bot conversation quality tracked — low satisfaction conversations reviewed weekly patterns fed back to improve responses. Marketing Bot content engagement tracked — high-performing templates replicated across more agents.	Consumer Bot must handle frustrated or emotionally charged users with empathy guardrails. Marketing Bot content must comply with RECO advertising guidelines — cannot make unsubstantiated property claims. Market Intelligence Bot context limits mean it cannot analyse entire MLS in one call.	Consumer Bot converts 24/7 website visitors to leads at times agents cannot work — worth 3-5 additional leads per month per agent at scale. Market Intelligence Bot positions Broko agents as market experts — strong recruitment and retention benefit.	Content generation, consumer qualification, lead logging, market data aggregation, report generation — automated. Megha reviews content quality weekly, Thrilok monitors bot performance metrics.
BRK-M07-005	AI tests every other AI output before delivery + weekly automated strategy intelligence for CEO	Validation Bot accuracy improves as hallucinations caught become training examples for detection model. Innovation Board Bot recommendations tracked — ones Pankaj acts on vs ignores — model learns what is strategically relevant.	LLM confidence scores not always reliable indicators of accuracy — model can be confidently wrong. Context window limits mean validation bot cannot always access full context of what it is validating. Innovation Board may surface irrelevant ideas without sufficient business context.	Validation Bot creates publishable claim: every Broko AI output is independently verified before delivery. No other proptech platform has this — major investor differentiator and SaaS selling point for enterprise clients.	Confidence scoring, hallucination detection, flagging for human review, validation logging, weekly innovation report generation — automated. Thrilok reviews validation failure patterns weekly.
M08 — Data, Privacy & Compliance					
BRK-M08-001	Complete compliance: PIPEDA, TRESA, FINTRAC, CASL, VOW rules, AODA, Human Rights Code	Compliance requirements monitored automatically — regulatory feeds monitored → when new requirement published Mihail alerted within 48 hours → implementation tracked to completion in Notion.	Compliance landscape changing rapidly for AI-powered real estate — PIPEDA modernisation Bill C-27 may change AI data processing requirements. CASL consent records must be producible on demand. FINTRAC requires ongoing staff training.	Compliance-first reputation becomes SaaS sales advantage — risk-averse brokerages pay premium for compliant-by-default platform. Being most compliant proptech in Canada is defensible position and credible PR story.	Consent capture, FINTRAC form generation, data retention enforcement, CASL unsubscribe handling, compliance status reporting — automated. Mihail and legal counsel review quarterly.
BRK-M08-002	WAF, DDoS, anti-scraping, Zero Trust, MFA everywhere, audit logs, pen testing, dependency scanning	Security event logs analysed by Claude monthly → unusual patterns flagged → Praveen investigates → security posture improves continuously. Snyk vulnerability reports auto-triaged — critical patches applied within 24 hours.	Security and development velocity in tension — controls can slow deployment if not implemented thoughtfully. Zero Trust implementation complex for fast-moving startup. Pen test findings must be fixed before next test.	Strong security posture becomes SaaS sales argument — institutional brokerages and large companies will not subscribe to platform that cannot pass their security questionnaire. SOC2 certification opens enterprise market.	Vulnerability scanning, dependency updates, log analysis, anomaly detection, MFA enforcement — automated. Praveen reviews security dashboard weekly.
BRK-M08-003	Architecture and governance for accumulating Broko-specific data as long-term competitive advantage	Data value assessed quarterly — which signals most improve AI model accuracy → those prioritised for capture. Data moat strength measured by model performance improvement rate vs time. Virtuous cycle: more data → better AI → more agents → more data.	Data collection must comply with PIPEDA — cannot collect more than stated purpose requires. Storing all interaction data has ongoing costs growing with usage. Proprietary data may have limited value if market changes significantly.	Proprietary data moat is single most important long-term competitive advantage. In $25-35M raise conversation investors will ask: what makes Broko defensible? Answer is: our data. No competitor can buy 12 months of Broko-specific training data.	Data collection, storage, anonymisation, transformation, versioning — automated. Pankaj and Vikas review data strategy quarterly.
M09 — Platform Infrastructure & DevOps					
BRK-M09-001	99.9% uptime, LCP <2.5s, API <200ms p95, auto-scaling, multi-AZ, disaster recovery documented	Performance metrics tracked weekly → degradation trends caught before users notice → proactive fixes applied. Auto-scaling rules tuned monthly based on traffic patterns. Cost per request tracked — efficiency improves.	Auto-scaling has cold start latency — first requests after scale-up may be slow. Redis cache invalidation needs careful design or stale data is served. CloudFront cache purging needed after content updates or old pages served.	99.9% uptime SLA becomes contractual SaaS commitment to external brokerage clients — must be achieved reliably before SaaS launch. Performance benchmarks are investor proof points — Broko platform is enterprise-grade.	Performance monitoring, alerting, auto-scaling, log aggregation, cost tracking — automated. Praveen reviews weekly performance report.
BRK-M09-002	Fully automated build-test-deploy pipeline plus API-first refactor enabling future SaaS multi-tenanc	Deployment frequency tracked — target daily deployments by Month 3. Build time tracked — target under 10 minutes. Failed builds analysed → flaky tests identified and fixed → pipeline reliability improves continuously.	CI/CD pipeline adds overhead in early stages — team must adapt to automated gates vs manual shortcuts. API-first refactor significant undertaking during active development. Multi-tenancy architecture decisions made now are very hard to change later.	API-first architecture is technical foundation of SaaS business. Every feature built API-first can be white-labelled and sold without rebuilding. This directly supports the $25-35M valuation story and SaaS revenue narrative.	Build execution, test running, security scanning, staging deployment, smoke testing, production deployment — automated. Debasis reviews pipeline health weekly.
BRK-M09-003	Systematic AWS cost reduction: prompt caching, Reserved Instances, Spot training, self-hosted tools	Monthly cost report auto-generated by Claude from AWS Cost Explorer API → compares to budget → identifies largest waste → Praveen implements top 3 recommendations → next month cost lower. Continuous improvement.	Cost optimisation creates performance trade-offs if taken too far — must balance cost vs reliability carefully. Reserved Instance commitments lock costs for 1-3 years — wrong sizing means paying for unused capacity.	Every dollar saved extends runway. At Phase 1 target of $3,500/month infra with $7-10K marketing, total burn ~$50K/month including salaries — gives 10 months runway on $500K raised. Critical financial metric.	Cost monitoring, budget alert triggering, resource utilisation reporting, Reserved Instance recommendation — automated. Praveen reviews and acts monthly.

Ticket	Task	Feedback & Self-Learning Loop	Loopholes & Risks	Growth Opportunity	Automation Opportunity
M10 — QA, Testing & Self-Healing					
BRK-M10-001	E2E browser tests, API tests, load tests, mobile tests, visual regression, accessibility tests	Test coverage tracked weekly — gaps identified → Tantusree prioritises new test writing. Flaky tests identified and fixed within 48 hours. Test execution time tracked — must stay under 10 minutes for CI/CD efficiency.	Automated tests cannot catch all bugs — especially UI/UX issues and business logic errors requiring domain expertise. Test suite maintenance overhead grows with codebase — needs continuous investment. Load tests can be expensive if run too frequently in cloud.	High test coverage means fearless rapid development — developers ship confidently knowing tests catch regressions. Test results are quality proof for investors and SaaS clients. Test suite becomes an IP asset.	Test execution, coverage reporting, failure notification, test data generation, visual regression comparison — automated. Tantusree reviews new test cases and failure patterns weekly.
BRK-M10-002	Every bug: logged → 24hr RCA → fix → automated test generated → same bug can never reach production	Bug patterns analysed monthly → systemic issues identified → architectural fixes prioritised → bug rate trends down over time. RCA quality improves as Thrilok trains Claude on Broko-specific error patterns.	RCA quality depends on quality of error logs — insufficient logging means root cause cannot be determined. Some bugs have multiple contributing causes. AI-assisted RCA may identify wrong root cause if similar-looking bugs have different underlying causes.	After 3 months of RCA running, Broko has comprehensive database of every bug and fix — training resource for new developers and quality metric for investors. Bug escape rate becomes a KPI for SaaS quality guarantees.	Error capture, ticket creation, RCA template generation, test case creation from RCA, regression test updates — automated. Tantusree and David manage the process together.
BRK-M10-003	Zero unstable releases: mandatory pre-release gates, post-deploy regression, instant rollback	Deployment success rate tracked — target 100% successful deployments. Post-deploy monitoring for 1 hour catches issues before user complaints. Rollback frequency tracked — frequent rollbacks indicate upstream process problem.	Strict gates can slow deployment frequency if tests are slow or flaky — balance needed. Rollback may not be possible if database migrations are involved — migration strategy needs careful planning from the start.	Zero production incidents from deployments becomes credibility claim for SaaS clients who cannot afford platform downtime during busy listing periods. Production stability is prerequisite for SaaS SLA commitments at enterprise level.	Pre-deploy gate checking, post-deploy monitoring, rollback triggering, incident notification — automated. Tantusree is the human gate for all production deployments.
M11 — Finance, Accounting & Seed Round					
BRK-M11-001	Commission tracking, burn rate monitoring, P&L, investor reporting plus CFO hired before raise	Financial metrics tracked weekly → Claude generates monthly investor-ready financial summary → Pankaj reviews and sends to investors. Burn rate vs plan tracked — if burning faster than planned Claude flags and suggests cost reductions.	Without CFO, financial governance gaps exposed in investor due diligence — deal killer. Commission calculation errors destroy agent trust immediately. Revenue recognition rules for real estate transactions specific — must be correctly implemented.	Strong financial controls plus CFO credibility enables larger raise at better valuation. Monthly investor updates with professional financials build confidence between close and next milestone. Clean cap table prevents Series A complications.	Commission calculation, invoice generation, expense categorisation, monthly P&L generation, investor report drafting — automated. CFO reviews and signs off. Mihail handles day-to-day bookkeeping.
BRK-M11-002	Pitch deck, live product demo, traction metrics, data room, investor outreach for $25-35M raise	Investor feedback from every pitch logged → patterns identified → deck and demo refined iteratively. Most common investor objections tracked → pre-emptive answers built into deck. Win rate by investor type tracked.	Raising $25-35M at current stage requires exceptional storytelling and proof points — not just a vision. Investors will do deep technical due diligence — Thrilok must defend CMA architecture in detail. Without SaaS revenue the technology valuation is harder to justify.	The jump from $15M to $25-35M valuation target changes everything about what needs to be built and demonstrated. Investors at this level want: defensible tech, clear path to scale, unit economics proof, and a team that can execute.	Investor meeting scheduling, data room access tracking, follow-up communications, pitch performance analysis — automated. Pankaj owns all investor relationships personally.
M12 — Humanoid & Future Tech R&D					
BRK-M12-001	AI system that simulates any brokerage role: BOR, admin, agent, customer service, transaction manage	Each software humanoid interaction logged and evaluated → weakest capabilities identified → underlying bots improved → humanoid gets smarter. Performance benchmark: can it handle 95% of interactions without human escalation?	Multi-agent orchestration with LangGraph is complex — agent loops can get stuck or produce inconsistent results. Context window limits across multiple sequential bot calls means important early context may be lost. Multi-agent latency higher than single-agent — response time may frustrate users.	Working software humanoid demo is most powerful investor moment in pitch — shows vision is real and near-term not science fiction. When RECO permits physical humanoid launches from this software foundation. First mover advantage is enormous.	Role simulation, context passing between bots, conversation memory, escalation to human, interaction logging — automated. Vikas and Thrilok review weekly performance metrics.
BRK-M12-002	Physical open house bot on tablet kiosk plus ongoing RECO/CREA monitoring for humanoid launch	Open house bot interaction quality tracked per session → weak responses identified → knowledge base updated → next open house performs better. Visitor-to-lead conversion rate tracked and optimised continuously.	iPad kiosk has hardware reliability issues in physical space — screen damage battery life connectivity. Open house visitors may be uncomfortable with AI in person — needs very friendly interface design and clear AI disclosure.	Open house bot captures visitor data during entire open house — agents can host more open houses simultaneously without being present. Physical presence of technology at open house is powerful PR — media coverage opportunity and major differentiator.	Visitor registration, question answering, lead capture, CRM logging, agent notification, follow-up scheduling — automated. Agent monitors remotely and can join conversation if needed.
